## Aquadopp Profiler 400 kHz - 500 m, Z-Cell, Generation 2

# Up to 90 m current profiling range and no blanking; ideal for mean and boundary current measurements

Need to collect accurate 3D currents very near the seabed or sea surface, in addition to a full water-column profile?

The Z-Cell (Zero Cell) 400 kHz Aquadopp allows current measurement to start right at the instrument's level through an innovative approach: it has side-looking beams fully integrated into the instrument's head, effectively removing the blanking distance normally applicable to ADCPs.

See the details of the Generation 2 Aquadopp updates in the release notes here.

#### Highlights

- ✓ Up to 90 m current profiling range
- Capable of measuring surface or bottom currents
- ✓ Ideal for mean current measurements

#### **Applications**

- Mounted on bottom frames, with ability to also measure near-bed currents
- Mounted on surface buoys, with the ability to also measure surface currents
- Mean flow measurements with high focus on ease of use and simplicity
- ✓ Studies of tidal currents
