Signature 500 - 300 m

Mean currents and turbulence, plus wave height, direction and ice tracking

The Signature 500 ADCP is designed for flexibility. It measures current profiles at up to 8 Hz sampling frequency. It can also measure direct vertical velocity profiles, wave height and direction, and acoustic ranging to ice. The center beam also functions as a biological echosounder, enabling high-resolution measurements of biomass in the water column. All these features can be combined using Nortek's patented concurrent mode technology.

Highlights

- ✓ Five beams for mean currents and turbulence
- ✓ Wave height and direction
- ✓ Acoustic ranging to ice

Applications

- ✓ Simultaneous current and turbulence studies at up to 70m range
- Sediment transport studies or biomass estimates using optional scientific echosounder
- ✓ Buoy-mounted measurements in highenergy areas with optional AHRS for motion correction
- ✓ Wave measurements and ice monitoring using acoustic surface tracking (AST)
